

## REMARKS

Claim 1 was rejected under the King reference, which is basically a typing system which attempts to determine what the user meant when the user touched a key that has multiple meanings. There is no effort to machine generate sentences from sentence portions.

Nonetheless, to make the differences even more apparent, the claim has been amended to explain that sentence portions include at least two words.

The system in King simply attempts to guess what word the user is attempting to type based on the keys that have been touched. There is no option that includes two words.

The objection under Section 112 to claim 30 has also been corrected.

In view of these remarks, the application is now in condition for allowance and the Examiner's prompt action in accordance therewith is respectfully requested.

Respectfully submitted,

Date: October 22, 2004
